Digital Video Projector
16:9 widescreen display

User Manual
Declaration of Conformity

Directives covered by this Declaration

2006/95/EC Low Voltage Equipment Directive.

Products covered by this Declaration

Large screen video projector type M-Vision Cine LED

The CE mark was first applied in: December 2009

Basis on which Conformity is being declared

The products identified above comply with the protection requirements of the above EU directives, and the manufacturer has applied the following standards.

The technical documentation required to demonstrate that the products meet the requirements of the Low Voltage directive has been compiled by the signatory below and is available for inspection by the relevant enforcement authorities.

Signed: D.J. Quinn, Product Development Director

Authority: D.J. Quinn, Product Development Director

Date: 1 December 2009

Attention!

The attention of the specifier, purchaser, installer, or user is drawn to special measures and limitations to use which must be observed when these products are taken into service to maintain compliance with the above directives. Details of these special measures are available on request, and are also contained in the product manuals.
Important Information

Please read this user manual carefully before using the projector, and keep the manual handy for future reference.

A serial number is located on the back of the projector. Record it here:

Symbols used in this guide

Warnings

⚠️ ELECTRICAL WARNING: this symbol indicates that there is a danger of electrical shock unless the instructions are closely followed.

⚠️ WARNING: this symbol indicates that there is a danger of physical injury to yourself and/or damage to the equipment unless the instructions are closely followed.

ระว์ NOTE: this symbol indicates that there is some important information that you should read.

Trademarks

• IBM is a registered trademark of International Business Machines Corporation.

• Macintosh and PowerBook are registered trademarks of Apple Computer, Inc.

• Other product and company names mentioned in this user’s manual may be the trademarks of their respective holders.

Product revision

• Because we at Digital Projection continually strive to improve our products, we may change specifications and designs, and add new features without prior notice. Projectors built prior to this revision of the User Manual may therefore not include all the features described.

General precautions

⚠️ Do not open the cabinet. There are no user serviceable parts inside.

   Use only the power cable provided.

   Ensure that the power outlet includes a Ground connection, as this equipment MUST be earthed.

   Take care to prevent small objects such as paper or wire from falling into the projector. If this does happen, switch off immediately, and have the objects removed by authorised service personnel.

   Do not expose the projector to rain or moisture, and do not place any liquids on top of the projector.

   Unplug before cleaning, and use a damp, not wet, cloth.

   Do not touch the power plug with wet hands.

   Do not touch the power plug during a thunder storm.

   Handle the power cable carefully and avoid sharp bends. Do not use a damaged power cable.

   The LED module in this projector should be changed ONLY by authorised and qualified service personnel.

⚠️ Do not touch the ventilation outlets, as they will become hot in use.

   Do not cover or obstruct the ventilation outlets or inlets.

   Do not cover the lens whilst the projector is switched on. This could cause a fire

   Never use strong detergents or solvents such as alcohol or thinners to clean the projector and lens.
Installation precautions

The projector must be installed only by suitably qualified personnel, in accordance with local building codes.

The projector should be installed as close to the power outlet as possible.

The power connection should be easily accessible, so that it can be disconnected in an emergency.

Ensure that there is at least 30cm (12in) of space between the ventilation outlets and any wall, and 10cm (4in) on all other sides.

Do not install the projector close to anything that might be affected by its operational heat, for instance, polystyrene ceiling tiles, curtains etc.

The projector weighs approximately 15 kg (33 lbs). Use safe handling techniques when lifting the projector.

Do not stack more than three projectors.

When stacking projectors, the stack MUST be vertical, to ensure that the stresses are distributed to all four chassis corners.

Before installation, make sure that the surface, ceiling or rigging that is to support the projector is capable of supporting the combined weight of all the projectors.

Backup safety chains or wires should always be used with ceiling mount installations.

Do not place heavy objects on top of the projector chassis. Only the chassis corners are capable of withstanding the weight of another projector.

Do not drop or knock the projector.

Place the projector in a dry area away from sources of dust, moisture, steam, smoke, sunlight or heat.

Operation and configuration precautions

Software update should NOT be carried out except by, or with the supervision of, Digital Projection Service personnel.
Compliance with international standards

Noise

GSGV Acoustic Noise Information Ordinance
The sound pressure level is less than 32 dB (A) according to ISO 3744 or ISO 7779.

RF Interference

FCC
The Federal Communications Commission does not allow any modifications or changes to the unit EXCEPT those specified by Digital Projection in this manual. Failure to comply with this government regulation could void your right to operate this equipment.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant with Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a residential environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications.

European Waste Electrical and Electronic Equipment (WEEE) Directive
Digital Projection Ltd is fully committed to minimising Waste Electrical and Electronic Equipment. Our products are designed with reuse, recycling and recovery of all components in mind. To this end, at end of life, your projector may be returned to Digital Projection Ltd or its agent so that the environmental impact can be minimised.

Getting Started Guide
(111-185)
Key features of the projector

Congratulations on your purchase of the Digital Projection M-Vision Cine LED projector.

The imagery benefits associated with the M-Vision are plentiful, including an expanded colour gamut range and accelerated contrast performance. Augmenting these benefits is the over 60,000 hour lamp life, courtesy of solid state illumination technology, which guarantees a long and low-maintenance display life.

Installation is incredibly flexible due to the M-Vision’s compact and lightweight chassis design, and extraordinary lens shift range of .15 of frame horizontal and .6 of frame vertical. Multiple lens options provide further flexibility, with a throw range from .73 to 2.40:1. Connectivity includes two HDMI inputs, as well as RGB via D-15, component, composite and S-Video inputs.

Providing 3-chip colour saturation from a small-form single-chip display, the M-Vision Cine LED presents a powerful yet remarkably affordable solution for a variety of commercial and home entertainment applications where image quality and long-life usage are equally important. In any environment where ambient light can be controlled, the M-Vision Cine LED represents the perfect low maintenance home theater projector in limited ambient light.

As is the case with all Digital Projection displays, our advanced engineering guarantees the M-Vision Cine LED provides remarkable contrast and color saturation for years to come. Equally important, our legacy in superior customer and technical services assures our experienced support staff is always available to address your needs.

Key Features

- High resolution projector for low ambient light venues
- Applications: Command and Control, Simulation, Home Cinema, Fixed Install and Rental
- Brightness 1000 ANSI lumens ±10%
- Contrast 10,000:1 ±10%
- 1920 x 1080 resolution
- Precision mechanical design ensuring maximum amount of light from LED module reaches optics, without any operator adjustment
- 230-280W single phase, 100-240VAC ±10%
- Compact size, light weight - approximately 15 kg (33 lbs)
- Robust metal case
- RS232 connection for remote operation using control codes
- Seven selectable Digital and Analogue Video inputs for display of the latest as well as legacy video standards.
  - HDMI, RGBHV, Component, S-Video, Composite all as standard
- IR remote control for easy setup
1. Introduction

Screen requirements

Aspect ratio

Fitting the image to the DMD
The projector uses a DMD (Digital Mirror Device) to create the image that is projected onto the screen. The resolution of the DMD in this projector is 1920 x 1080 pixels, or to put it another way, its aspect ratio is 16:9.

1920 pixels

If the source image supplied to the projector has a different aspect ratio from this, or even if it has the same aspect ratio but fewer pixels, then the image will not fill the DMD. The projector therefore needs to scale the image.

The projector has five aspect ratio settings, so that you can choose the one that is most suitable for your image source. The settings are:

- **16:9**: the image is scaled to fill the DMD (and thus, a 16:9 screen).
- **Theaterscope**: the image is scaled such that a 2.35:1 image will be displayed at the correct aspect ratio when the projector is fitted with an anamorphic lens. Thus an image with an aspect ratio of 2.35:1 can be displayed using the full 16:9 resolution of the DMD.
- **4:3**: the image is scaled to fit a 4:3 screen, using the full height of the DMD.
- **4:3 Narrow**: to be used for 4:3 images in combination with an anamorphic lens. The image is scaled to fit the DMD vertically, but squeezed horizontally such that the lens will stretch it to the correct ratio.
- **Native**: the image is displayed with no scaling, at its original resolution, in the centre of the screen.

Examples of 16:9 images displayed with different aspect ratio settings

Note that, as the aspect ratio of the image matches that of the DMD, the 16:9 setting is best, unless there is some specific reason for wanting the smaller image, for instance, to maintain the same scale as other images from the same source.
Examples of 4:3 images displayed with different aspect ratio settings

The 4:3 setting is best, unless there is some specific reason for wanting the smaller Native image, for instance, to maintain the same scale as other images from the same source.

If you are using an anamorphic lens, the 4:3 Narrow setting should be used. The lens will stretch the image to the correct width.

Examples of 2.35:1 images displayed with different aspect ratio settings

The 16:9 setting is best, unless there is some specific reason for wanting the smaller Native image, for instance, to maintain the same scale as other images from the same source.

If you have an anamorphic lens, the Theaterscope setting would be a much better option. Because it uses the whole of the DMD, it will be a much brighter image than the letterboxed options shown above, and will fill a wider screen if this is available.

Notes

The 4:3 image shown here has far fewer pixels than the 1920 x 1080 of the DMD. Your image may be different.

If you are using an anamorphic lens, you will need to use the 4:3 Narrow setting to correct the image.

The 2.35 image shown here has far fewer pixels than the 1920 x 1080 of the DMD. Your image may be different.

To take advantage of the Theaterscope setting, you MUST have an anamorphic lens.
Diagonal screen sizes

Screen sizes are sometimes specified by their diagonal size (D) in inches. When dealing with large screens and projection distances at different aspect ratios, it is more convenient to measure screen width (W) and height (H).

The example calculations below show how to convert diagonal sizes in inches into width and height, at various aspect ratios.

2.35:1 (Scope)

\[ W = D \times 0.92\text{in} \quad H = D \times 0.39\text{in} \]

1.85:1

\[ W = D \times 0.88\text{in} \quad H = D \times 0.47\text{in} \]

16:9 = 1.78:1 (native aspect ratio)

\[ W = D \times 0.87\text{in} \quad H = D \times 0.49\text{in} \]

1.66:1 (Vista)

\[ W = D \times 0.86\text{in} \quad H = D \times 0.52\text{in} \]

16:10 = 1.6:1

\[ W = D \times 0.85\text{in} \quad H = D \times 0.53\text{in} \]

4:3 = 1.33:1

\[ W = D \times 0.8\text{in} \quad H = D \times 0.6\text{in} \]
Fitting the image to the screen

It is important that your screen is of sufficient height and width to display images at all the aspect ratios you are planning to use.

Use the conversion chart, or the sample calculations below to check that you are able to display the full image on your screen. If you have insufficient height or width, you will have to reduce the overall image size in order to display the full image on your screen.

\[
\begin{align*}
2.35:1 \text{ (Scope)} & \\
W &= H \times 2.35 & H &= W \times 0.426 \\
1.85:1 & \\
W &= H \times 1.85 & H &= W \times 0.54 \\
16:9 &= 1.78:1 \text{ (native aspect ratio)} & \\
W &= H \times 1.78 & H &= W \times 0.56 \\
1.66:1 \text{ (Vista)} & \\
W &= H \times 1.66 & H &= W \times 0.6 \\
16:10 &= 1.6:1 & \\
W &= H \times 1.6 & H &= W \times 0.625 \\
4:3 &= 1.33:1 & \\
W &= H \times 1.33 & H &= W \times 0.75
\end{align*}
\]
Positioning the screen and projector

**Optimum viewing position**

For optimum viewing, the screen should be a flat surface perpendicular to the floor. The bottom of the screen should be 1.2m (4 feet) above the floor and the front row of the audience should not have to look up more than 30° to see the top of the screen.

The distance between the front row of the audience and the screen should be at least twice the screen height and the distance between the back row and the screen should be a maximum of 8 times the screen height. The screen viewing area should be within a 60° range from the face of the screen.

![Diagram of screen and projector positioning](image)

**Notes**

- The projector should be installed as close to the power outlet as possible.
- The power connection should be easily accessible, so that it can be disconnected in an emergency.
- Ensure that there is at least 30cm (12in) of space between the ventilation outlets and any wall, and 10cm (4in) on all other sides.
- Do not install the projector close to anything that might be affected by its operational heat, for instance, polystyrene ceiling tiles, curtains etc.

![Image can be flipped for rear projection](image)

- The image can be flipped for rear projection (see section 4. Using the menus, Image menu) and displayed without the need for extra mirrors or equipment.
- However, you must ensure that there is sufficient distance behind the screen for the projector to be correctly located.
- Rear installation is generally more complicated and advice should be sought from your local dealer before attempting it.
Screen size vs throw distance
Throw distance is the distance measured from the front of the projector to the screen. This is an important calculation in any projector installation as it determines whether or not you have enough room to install your projector with the desired screen size, and if your image will be the right size for your screen.

Calculating screen width and throw distance
\[
\text{Throw Distance} = \frac{\text{Screen Width} \times \text{Lens Throw Ratio}}{\text{Lens Throw Ratio}}
\]

Three models of the projector are available, fitted with the following lenses:

- **Fixed lens**: 0.73:1  
  Focus range: to be confirmed
- **Short-throw lens**: 1.56–1.86:1 zoom  
  Focus range: 2–7m (6.6 - 23ft)
- **Long-throw lens**: 1.85–2.40:1 zoom  
  Focus range: 2.5–10m (8.2 - 32.8ft)

Two optional converter lenses are available, which modify the throw ratios as shown below:

- **0.8x converter**: 1.25–1.49:1  
  1.95–2.33:1
- **1.25x converter**: 1.48–1.92:1  
  2.31–3:1

These throw ratios are correct for images that fill the full width of the DMD. For images that do not fill the full width, the throw ratio will be larger. For 4:3 images, the throw ratio is increased by a factor of 1.33. The effect of this can be seen on the lens charts on the following pages.
2. Installation  

**Digital Projection M-Vision Cine LED User Manual**

**Lens charts for the short throw zoom lens**

**example**
- You can display a 16:9 image with a screen width of 3m at a distance of 5m, but for a screen width of 3.5m, you will need to use the 0.8x converter lens.

---

**Notes**

---

![Graph showing screen width vs. throw distance for 16:9 images](image1)

- **using the 0.8x converter lens**
- **without a converter lens**
- **using the 1.25x converter lens**

---

*Page 2.8*  

*Rev E October 2014*
**Lens charts for the long throw zoom lens**

**example**
- You can display a 4:3 image with a screen width of 3m at a distance of 6m, but for a screen width of 2m, you will need to use the 1.25x converter lens.

![Screen width charts for 4:3 and 16:9 images](image)

**Notes**

> Note that for the long throw lens, there is some overlap between the range available using the converter lenses and that using no converter lens.
2. Installation

2.10

Shifting the image

Ideally, the projector should be positioned perpendicular to the screen.

The normal position for the projector is at the centre of the screen. However, you can set the projector above or below the centre, or to one side, and adjust the image using the Lens shift controls on the top of the projector to maintain a geometrically correct image.

If the projector is fitted with the fixed 0.73:1 lens then there are no mechanical controls for lens shift.

Slide the badge in the direction shown below, then gently lift off by hand. Do NOT prise off using a tool.

If the lens is to be shifted in two directions combined, the maximum range is somewhat less, as can be seen below.

The image can be shifted by up to:

- ± 0.6 of the height of a full screen image (known as 120% shift)
- ± 0.15 of the width of a full screen image (known as 30%)

It is physically possible to shift the lens further than this, however there will be some distortion of the image beyond the ranges specified above.
### Mounting the projector

The four adjustable feet under the chassis allow the projector to be lowered onto a flat surface without any danger of hands being trapped between the bottom frame and the surface.

#### Ceiling mounting

The projector is designed to be used on a flat surface, but it can be suspended from a ceiling. Three M4 mounting holes with a 0.7mm pitch are provided under the projector to allow bolting to a ceiling mounting plate.

To use the projector upside down, set **Ceiling mode** to **On**, in the **System** menu, to invert the image.

#### Level adjustment

If the projector is to be operated from a flat surface such as a projector table, then adjustment of projector level should be made by turning the four feet under the chassis.

Ideally, the projector should be positioned perpendicular to the screen, and the lens shift controls used to align the image with the screen, to maintain a geometrically correct image.
Rear projection
To use rear projection, set Rear Projection to On, in the System menu, to reverse the image.

In rear-screen applications where space behind the projector is limited, a mirror may be used to fold the optical path. The position of the projector and mirror must be accurately set. If you are considering this type of installation, contact your dealer for assistance.

Stacking projectors
The projector is capable of supporting the weight of up to three other projectors safely. The stack should be positioned vertically and perpendicular to the screen, and the lens shift controls used to align the image with the screen, to maintain a geometrically correct image.

- Carefully lower each projector down onto the top of the others, making sure that they are vertically aligned with each other, and protected from becoming pushed over.
- Align the images from the projectors, using the Lens shift controls on the top of the projector.

Notes
- For more detailed information about using the menus, see section 4. Controlling the projector.
- Do not try to stack more than three projectors.
- When stacking projectors, the stack MUST be vertical, to ensure that the stresses are distributed to all four chassis corners.
- Make sure that the surface, ceiling or rigging that is to support the projector is capable of supporting the combined weight of all the projectors.
- Do not place heavy objects on top of the projector chassis. Only the chassis corners are capable of withstanding the weight of another projector.
- Backup safety chains or wires should always be used with ceiling mount installations.
- If the projector is fitted with the fixed 0.73:1 lens then there are no mechanical controls for lens shift.
Connecting the projector

Signal Inputs
The following inputs are available:

- **HDMI 1 & 2**: HDCP-compliant digital video inputs from HDMI or DVI sources.
- **RGB**: 15 pin D-type VGA style input from personal computer
- **Component 1**: RCA phono connectors for RGBS, (using Video input for sync) or YPbPr
- **Component 2**: BNC connectors for YPbPr
- **Video**: RCA phono connector for composite video or used as sync input for Component 1
- **S-Video**: standard 4 pin S-Video connector

*Input connection examples*

For more information on selecting an input source, see section 4. Overview, Using the control keys, and Using the menus.

For more information about pin connections and control codes see section 6. Appendix.

Control connections

The following connections are available:

Remote control
If infrared signals from the remote control cannot reach the projector due to excessive distance or obstructions such as walls or cabinet doors, you can connect an external IR repeater to the Remote control input, and position its IR sensor within range of the operator.

RS232 connection
All of the projector’s features can be controlled via a serial connection, using the text strings described in Remote communications protocol, in section 6. Appendix.

The RS232 connection can also be used to download the firmware updates, issued from time to time by Digital Projection.

Trigger 1 & 2
The Trigger 1 and Trigger 2 outputs are interchangeable:

Screen trigger: can be connected to an electrically operated screen, automatically deploying the screen when the projector starts up, and retracting the screen when the projector shuts down.

Aspect Ratio trigger: can be used to control screen shuttering for different aspect ratios

For more information about pin connections and control codes see section 6. Appendix.

For more information about the Trigger outputs see Control Menu in section 4. Controlling the projector.
2. Installation

Power connection

Notes

⚠️ Use only the power cable provided.

⚠️ Ensure that the power outlet includes a Ground connection, as this equipment MUST be earthed.

⚠️ Handle the power cable carefully and avoid sharp bends. Do not use a damaged power cable.
3. Getting Started

  Aspect ratio ............................................................................................. 3.4
  Image quality settings ............................................................................... 3.4
Switching the projector off ............................................................................ 3.4
3. Getting Started

Positioning the screen and projector

- Install the screen, ensuring that it is in the best position for viewing by your audience.

- Mount the projector, ensuring that it is at a suitable distance from the screen for the image to fill the screen, and that it is perpendicular to the screen.

Switching the projector on

- Connect the power cable between the mains supply and the projector.

Wait until the self-test has completed and the power indicator on the projector control panel shows steady blue. The LED module will be off and the projector will be in STANDBY mode.

- Press POWER ON on the remote control or POWER on the projector control panel to switch the projector ON. The power indicator on the control panel will flash blue for approximately 30 seconds, whilst the projector initialises. When the projector is ready for use, the power indicator will switch off.

Inserting batteries into the remote control

- Open the battery compartment and insert two AA size batteries, making sure they are inserted the correct way round, as shown below.

For more detailed information about positioning the screen and projector, see Positioning the screen and projector, in section 2. of the User Manual: Installation.

For more detailed information about:
- using the control keys on the remote control or the projector control panel,
- using the menus,
see section 4. of the User Manual: Controlling the projector.

If the red ISSUE indicator is illuminated continuously or flashing, see Error Codes in section 6 of the User Manual: Appendix, for more information.

Note that the blue POWER indicator light will be OFF when the projector is in normal RUNNING MODE.

Do not mix an old battery with a new one or different types of batteries.

If you will not use the remote control for a long time, remove the batteries to avoid damage from battery leakage.
Selecting an input signal or test pattern

Input
- Connect an video source to the projector. The signal should be automatically detected by the projector, and should be displayed within a two or three seconds.

- If more than one signal is connected to the projector, then select which signal is to be displayed, using the buttons on the remote control, or by pressing the SOURCE button on the projector control panel until the correct signal is displayed.

Test pattern
If you have no video source connected to the projector, then you can display a test pattern as follows:

- Press on the remote control, until the desired test pattern is displayed.

Adjusting the lens

Zoom
- Turn the smooth ring on the lens, closest to the case, to adjust the zoom so that the image fills the screen.

Focus
- Turn the knurled ring at the outer end of the lens, to adjust the focus until the image is sharp.

Shift
- Rotate the Digital Projection badge on top of the projector to reveal the shift adjustment access holes. Use the 5mm allen wrench to adjust the horizontal and vertical position of the image.

Notes

For more information about connecting input signals, see Signal Inputs, in section 2. of the User Manual: Installation.

For more detailed information about input connections, see Input signals in section 6. of the User Manual: Controlling the projector.

For more information about lens shift, see Shifting the image in section 2. of the User Manual: Installation.

If the projector is fitted with the fixed 0.73:1 lens then there are no mechanical controls for lens shift.

- Slide the badge in the direction shown below, then gently lift off by hand.

  Do NOT prise off using a tool.
3. Getting Started

Adjusting the projected image

Aspect ratio
- Press 🎮 on the remote control until the image is displayed in the correct aspect ratio.

Image quality settings
- Press any of the following keys on the remote control, followed by 📀 and 📀, to adjust these image quality settings:
  - Brightness 🌟
  - Contrast ⚖️
  - Sharpness 📀

Switching the projector off
- Press POWER OFF ⏿ on the remote control or POWER ⬆️ on the projector control panel, then press the button a second time to confirm your intention to switch off.

The LED module will switch off, and the power indicator on the control panel will flash blue for approximately 30 seconds until the projector has cooled down.

- Wait until the power indicator shows steady blue. The projector will now be in STANDBY mode.
- Disconnect the power cable from the projector.

Notes
- For more detailed information about:
  - using all the control keys on the remote control or the projector control panel,
  - using the menus,
  see section 4. of the User Manual: Controlling the projector.

- For the picture setting adjustments shown here:
  - after 5 seconds, if no adjustment has been made, the indicator will go out and the adjustment key must be pressed again.
  - to end the adjustment before 5 seconds has elapsed, press a different adjustment key, or press the key again.

Controlling the projector

The projector can be controlled from:

- the remote control
- the projector control panel
- the RS232 input

For more information about controlling the projector using the RS232 input, see Remote communications protocol in section 6. Appendix.

For information about how to connect the projector, see Connecting the projector in section 2. Installation, and Connections in section 6. Appendix.

- Many features are controlled from the menus using the menu navigation keys on the remote control or the projector control panel.

  For more information about using the menus, see later in this section, Using the menus.

- Some of the menu features, for example brightness, contrast and sharpness, can be accessed directly using the control keys at the bottom of the remote control.
The projector control panel is designed to be read in both table top or ceiling orientation, for ease of use.

The menu navigation keys are similar to those on the remote control, and are described in detail in Using the menus, later in this section.

**POWER**  
Press this once to switch the projector ON or twice to switch it to STANDBY mode.

**SOURCE**  
Press this repeatedly to cycle through the input sources, in the following order:

HDMI 1, HDMI 2, RGB, Component 1, Component 2, Video, S-Video, HDMI 1...

If you select a source that IS connected and active, the projector will automatically adjust to the parameters of the signal, and display it.

If you select a source that is NOT connected or active, the projector will continue searching through the input sources until it finds a valid signal.

**LED status indicators**  
The indicators on the control panel are as follows:

**POWER**  
off = NO POWER or normal RUNNING mode  
steady blue = STANDBY mode  
flashing blue = WARM-UP or COOL-DOWN mode

**ISSUE**  
off = NO ERROR  
flashing or steady red = ERROR

Many features are controlled from the menus using the menu navigation keys on the remote control or the projector control panel.

For more information about using the menus, see later in this section, Using the menus.
The remote control

Layout

Timeout

There is a 5 second timeout for the control keys at the bottom of the remote control:

- after 5 seconds, if no adjustment has been made, the indicator will go out and the adjustment key must be pressed again.

- to end the adjustment before 5 seconds has elapsed, press a different adjustment key, or press the key again.

There is a 30 second timeout for the menu navigation keys.

Notes

Many features are controlled from the menus using the menu navigation keys on the remote control or the projector control panel.

For more information about using the menus, see later in this section, Using the menus.

Some of the menu features, for example brightness, contrast and sharpness, can be accessed directly using the control keys at the bottom of the remote control.

For more information about using the control keys, see later in this section, Using the control keys.

In most situations, you can simply point the remote control at the screen which will reflect the IR signal from the remote back toward the receiver on the projector.

In some cases, however, ambient conditions may prevent this. In this case, point the remote control directly at the projector.

Remote reception angle
4. Controlling the projector

Using the control keys

Power

- Press POWER ON on the remote control to switch the projector ON.
  The power indicator on the control panel will flash blue for approximately 30 seconds, whilst the projector initialises. When the projector is ready for use, the power indicator will switch off.

- Press POWER OFF on the remote control to switch the projector to STANDBY mode.
  Press the button a second time to confirm your intention to switch to STANDBY mode.
  The LED module will switch off, and the power indicator on the control panel will flash blue for approximately 30 seconds until the projector has cooled down.
  Wait until the power indicator shows steady blue. The projector will now be in STANDBY mode.

Source

- To switch to one of the five sources programmed into the SOURCE buttons, then select using the 1 to 5 keys.
  If you select a source that is connected and active, the projector will automatically adjust to the parameters of the signal, and display it.
  If you select a source that is NOT connected or active, the projector will continue searching through the input sources until it finds a valid signal, in this order.
  HDMI 1, HDMI 2, RGB, Component 1, Component 2, Video, S-Video, HDMI 1...

Aspect ratio

- Press repeatedly to cycle through the Aspect ratio settings, in the following order:
  16:9, Theaterscope, 4:3, 4:3 Narrow, Native, 16:9...

User memory

- To switch to one of the three sets of image settings programmed into the USER MEMORY buttons, then select using the A, B or C keys.
Image quality settings

- Press any of the following keys on the remote control, followed by ◀ and ▶, to adjust these image quality settings:

  - Brightness
  - Contrast
  - Sharpness
  - Gamma
  - Overscan
  - Noise reduction
  - Brilliant-color
  - Colour temperature

**Example - Brightness screen control:**

![Brightness 100]

**Test pattern**

- Press the TEST key repeatedly to cycle through the Test patterns, in the following order:

  White, Black, Red, Green, Blue, Cyan, Magenta, Yellow, Chequerboard, Greyscale, Alignment grid, White...

---

**Notes**

- For more information about all these image quality settings, and more, see Main menu and Advanced menu later in this section, Using the menus.

- Some of the settings will not be available for some of the input sources.
Using the menus

Navigating menus and submenus
The menus are organised into five pages. When the menus are in use, the menu page headings are always visible at the top of the menu panel.

Most menu items can be adjusted directly, but some items lead to a submenu.

The menus will always open at the same page that was last viewed. The example below shows the first menu page displayed following power on, which is always the Main menu.

<table>
<thead>
<tr>
<th>MAIN</th>

</tbody>
</table>

- Use the navigation keys on the remote control or the projector control panel to navigate through the menus:

- To display the menus, press MENU on the remote control or the projector control panel.
- To select a different menu page, use the ← and → keys.
- To select a menu item, use the ▲ and ▼ keys.
- To close a menu, press MENU again.

Notes

Some menu controls can be accessed directly using the control keys (see earlier in this section).

There is a 30 second timeout for the menu navigation keys. If a menu times out, simply press the Menu key again.

The SELECT key on the projector control panel has exactly the same function as the ENTER key on the remote control.

To exit from the menus completely, you may need to press MENU up to three times.
Main menu

- To display the menus, press MENU on the remote control or the projector control panel.
- Use the ← and → keys to select the Main menu page,

<table>
<thead>

</tr>
</tbody>
</table>

- To select a menu item, use the ↑ and ↓ keys until the item is highlighted.

Aspect Ratio
- Use the ← and → keys to select from:

16:9 the image is scaled to fill the DMD (and thus, a 16:9 screen).

Theaterscope the image is scaled such that a 2.35:1 image will be displayed at the correct aspect ratio when the projector is fitted with an anamorphic lens. Thus an image with an aspect ratio of 2.35:1 can be displayed using the full 16:9 resolution of the DMD.

4:3 the image is scaled to fit a 4:3 screen, using the full height of the DMD.

4:3 Narrow to be used for 4:3 images in combination with an anamorphic lens. The image is scaled to fit the DMD vertically, but squeezed horizontally such that the lens will stretch it to the correct ratio.

Native the image is displayed with no scaling, at its original resolution, in the centre of the screen.

Notes

To select a different menu, press MENU once or twice, so that no items are highlighted, then use the the ← and → keys to select a different page.

To exit from the menus completely, you may need to press up to three times.

Image changes made using the menus will take effect immediately.

Some menu items may be greyed out - unavailable due to the effect of settings made in other menus, or due to the type of input signal.

For more information about the Aspect ratio settings, see Screen requirements in section 2. Installation.
4. Controlling the projector

Main menu continued

Preset options

- Press ENTER or SELECT.

The Presets submenu will appear:

<table>
<thead>
<tr>
<th>MAIN</th>
<th>ADVANCED</th>
<th>SYSTEM</th>
<th>CONTROL</th>
<th>SERVICE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Recall Presets</td>
<td>Preset A</td>
<td>Preset B</td>
<td>Preset C</td>
<td>Preset D</td>
</tr>
<tr>
<td>Save Presets</td>
<td>Preset A</td>
<td>Preset B</td>
<td>Preset C</td>
<td>Preset D</td>
</tr>
</tbody>
</table>

- Use the ▲ and ▼ keys to select from:
  - Recall Presets
  - Save Presets

**Recall Presets**

Recall a set of image settings that have previously been saved to Presets A, B, C or D.

- Use the ◄ or ► keys to select which Preset is to be recalled.
- Select Default, to recall the factory default settings.

**Save Presets**

Save the image settings for all seven inputs to the selected Preset.

- Use the ◄ or ► keys to select which Preset the settings will be saved to.

The following settings will be saved:

- Brightness
- Contrast
- Saturation
- Hue
- Sharpness
- Noise Reduction
- Color Space
- Video Standard
- Gamma
- Colour Temperature
- Color Gamut
- Brilliant Color
- Adaptive Contrast
- RGB Offsets
- RGB Gains

- To return to the Main menu, press MENU once.

Notes

- To select a different menu, press MENU once or twice, so that no items are highlighted, then use the ◄ and ► keys to select a different page.

- To exit from the menus completely, you may need to press MENU up to three times.

- Image changes made using the menus will take effect immediately.

- The Presets can also be recalled using the USER MEMORY keys on the remote control. See Using the control keys earlier in this section.

  Note: Preset D is available only through the Control menu, not through the remote control.

- When Save Presets is selected, the image settings for ALL seven inputs are saved.
Main menu continued

Brightness

- Press ▼ or ▲ once.

After the first press, the Brightness adjustment bar will appear:
- Use the ▼ and ▲ keys to adjust the Brightness from 0 to 200:
- To return to the Main menu, press MENU once.

Contrast

- Press ▼ or ▲ once.

After the first press, the Contrast adjustment bar will appear.
- Use the ▼ and ▲ keys to adjust the Contrast from 0 to 200:
- To return to the Main menu, press MENU once.

Saturation

Saturation is the amount of colour in the image. Decrease this setting if colors are too bright; increase it if colors appear muted or washed out.

- Press ▼ or ▲ once.

After the first press, the Saturation adjustment bar will appear.
- Use the ▼ and ▲ keys to adjust the Saturation from 0 to 200:
- To return to the Main menu, press MENU once.

Hue

Hue is the ratio of red to green in the image. Decrease this setting to shift the hue toward red; increase it to shift the hue toward green.

- Press ▼ or ▲ once.

After the first press, the Hue adjustment bar will appear.
- Use the ▼ and ▲ keys to adjust the Hue from 0 to 200:
- To return to the Main menu, press MENU once.

Notes

- To exit from the menus completely, you may need to press MENU up to three times.
- Image changes made using the menus will take effect immediately.
- Image changes made using the menus will take effect immediately.
- Some menu items may be greyed out - unavailable due to the effect of settings made in other menus, or due to the type of input signal.
- Image quality settings are often interactive - a change in one setting may require a change to be made in another setting.
- Setting Adaptive Contrast to On in the Advanced menu will affect any image quality settings made in other menus.
Main menu continued

Sharpness
- Press \( \leftarrow \) or \( \rightarrow \) once.
  
  After the first press, the Sharpness adjustment bar will appear.

- Use the \( \leftarrow \) and \( \rightarrow \) keys to adjust the Sharpness from 0 to 200:

- To return to the Main menu, press \( \text{Menu} \) once.

Noise Reduction
- Press \( \leftarrow \) or \( \rightarrow \) once.
  
  After the first press, the Noise reduction adjustment bar will appear.

- Use the \( \leftarrow \) and \( \rightarrow \) keys to adjust the Noise reduction from 0 to 200:

- To return to the Main menu, press \( \text{Menu} \) once.

Overscan
Some television programs are produced based on the assumption that older television sets may not display the outer edges of the broadcast picture area. Consequently the edges of the image may be noisy or badly defined. Overscan is used to compensate for this, by hiding the outer edges of the image.

- Use the \( \leftarrow \) or \( \rightarrow \) keys to select from:
  
  Off

  Crop
    blanks a 3% border from the left and right edges of the image

  Zoom
    increases the horizontal and vertical resolution of the displayed image by 6%, so that the all four edges fall outside the screen area

Notes

- To exit from the menus completely, you may need to press \( \text{Menu} \) up to three times.

- Image changes made using the menus will take effect immediately.

- Some menu items may be greyed out - unavailable due to the effect of settings made in other menus, or due to the type of input signal.

- When the Aspect Ratio is set to Native, Overscan can only be set to Off or Crop
Main menu continued

Input Select

- Press ENTER or SELECT.

The Input select submenu will appear:

- Use the ▲ and ▼ keys to select from:
  - HDMI 1
  - HDMI 2
  - RGB
  - Component 1
  - Component 2
  - Video
  - S-Video

- Press ENTER or SELECT, to select a different input source.

- To return to the Main menu, press Menu once.

Resync

If the image has become unstable or degraded, it may be possible to improve the display:

- Press ENTER or SELECT.

  The projector will attempt to re-synchronise to the current input source.
4. Controlling the projector

**Advanced menu**

- To display the menus, press MENU on the remote control or the projector control panel.

- Use the ◄ and ► keys to select the Advanced menu page.

**Notes**

- To select a different menu, press MENU on the remote control or the projector control panel once or twice, so that no items are highlighted, then use the ◄ and ► keys to select a different page.

- To exit from the menus completely, you may need to press MENU up to three times.

- Image changes made using the menus will take effect immediately.

- Some menu items may be greyed out - unavailable due to the effect of settings made in other menus, or due to the type of input signal.

- To determine what is the correct colour space to use, consult the user manual for the video source.

**Colour Space**

In most cases, the Auto setting will determine the correct color space to use. If it does not, you can select the appropriate setting manually.

- Use the ◄ and ► keys to select from:
  
  - Auto
  - YPbPr
  - YCbCr
  - RGB-PC
  - RGB Video
Advanced menu continued

Video Standard
In most cases, the Auto setting will determine the correct video standard to use. If it does not, you can select the appropriate setting manually.

- Use the and keys to select from:
  - Auto
  - NTSC used mainly in the United States and Japan
  - PAL used in Europe, Australia and many other parts of the world, typically with a 50Hz frame rate
  - SECAM used mainly in France and Russia

Gamma
Video recordings are often supplied with a gamma adjustment applied. The projector's gamma setting can be used to correct for this. If you are unsure, then choose a setting that gives a decent level of contrast, whilst maintaining good detail in the darkest and lightest areas of the image.

- Use the and keys to select from:
  - CRT gamma of 2.5
  - Film gamma of 2.2
  - Video similar to Film but improves the dark areas of the image - especially suitable for images from video cameras
  - Punch enhanced brightness and increased colour saturation for high ambient light environments
  - Graphics enhanced highlights and contrast, especially suitable for computer presentations

Colour Temperature
In general, a higher colour temperature gives a cooler feeling to the image, and a lower temperature gives a warmer feeling.

- Use the and keys to select from:
  - 5500K
  - 6500K
  - 7500K
  - 9300K

Notes
- To exit from the menus completely, you may need to press up to three times.
- Image changes made using the menus will take effect immediately.
- Some menu items may be greyed out - unavailable due to the effect of settings made in other menus, or due to the type of input signal.
- Image quality settings are often interactive - a change in one setting may require a change to be made in another setting.
- Setting Adaptive Contrast to On will affect any image quality settings made in other menus.
4. Controlling the projector

Advanced menu continued

Colour Gamut
In most cases, the Auto setting will determine the correct colour gamut to use. If it does not, you can select the appropriate setting manually.

Each setting defines the precise hue of each primary (red, green and blue) and secondary (yellow, cyan and magenta) color component used to generate the image.

- Use the ◀ and ▶ keys to select from:
  - Auto
  - SMPTE-C for NTSC, 480i and 480p sources
  - EBU for PAL, SECAM, 576i and 576p sources
  - REC709 for most other sources
  - Native uncorrected

Brilliant Color®
Brilliant Color® allows for increased projector brightness and improved color saturation by adding two extra colours to the normal Red – Green – Blue cycle. (extra colours are: Red + Green = Yellow, and Green + Blue = Cyan)

- Use the ◀ and ▶ keys to select from:
  - On (recommended)
  - Off

Dynamic Black
Dynamic Black reduces the overall light output for images that contain a lot of black. This improves the perceived contrast ratio.

- Use the ◀ and ▶ keys to select from:
  - 4x
  - 8x
  - Max.
  - Off

Adaptive Contrast
Adaptive Contrast expands the light and dark portions of the contrast curve of the image, depending on the mean luminance of the image.

- Use the ◀ and ▶ keys to select from:
  - On
  - Off

Notes
- To exit from the menus completely, you may need to press up to three times.
- Image changes made using the menus will take effect immediately.
- Some menu items may be greyed out - unavailable due to the effect of settings made in other menus, or due to the type of input signal.
- In most cases, Brilliant Color should be left On – switching it Off will result in reduced brilliance and contrast.
- Setting Dynamic Black to On will affect any image quality settings made in other menus.
- Setting Adaptive Contrast to On will affect any image quality settings made in other menus.
Advanced menu continued

RGB Adjust

- Press ENTER or SELECT.

The RGB Adjust submenu will appear:

<table>
<thead>
<tr>
<th>RGB Adjust</th>
<th>100</th>
</tr>
</thead>
<tbody>
<tr>
<td>Red Offset</td>
<td>100</td>
</tr>
<tr>
<td>Blue Offset</td>
<td>100</td>
</tr>
<tr>
<td>Green Offset</td>
<td>100</td>
</tr>
<tr>
<td>Red Gain</td>
<td>100</td>
</tr>
<tr>
<td>Blue Gain</td>
<td>100</td>
</tr>
<tr>
<td>Green Gain</td>
<td>100</td>
</tr>
</tbody>
</table>

Use the Gain controls to correct color imbalances in the bright areas of the image. Use the Offset controls in the RGB Adjust sub-menu to correct color imbalances in the dark areas of the image.

- Use the ▲ and ▼ keys to select from:
  - Red Offset
  - Blue Offset
  - Green Offset
  - Red Gain
  - Blue Gain
  - Green Gain

Offsets
- Use the ◀ and ▶ keys to adjust the Offset from 0 to 200.

Gains
- Use the ◀ and ▶ keys to adjust the Gain from 0 to 200.

- To return to the Advanced menu, press MENU once.

Notes

To select a different menu, press MENU once or twice, so that no items are highlighted, then use the the ▲ and ▼ keys to select a different page.

To exit from the menus completely, you may need to press MENU up to three times.

Image changes made using the menus will take effect immediately.

Some menu items may be greyed out - unavailable due to the effect of settings made in other menus, or due to the type of input signal.

A good way to carry out this adjustment is to use the chequerboard test pattern.

RGB settings are interactive - a change in one setting may require a change to be made in the other.
**Fine Sync**

- Press ENTER or SELECT.

The **Fine Sync** submenu will appear:

<table>
<thead>
<tr>
<th>MAIN</th>
<th>ADVANCED</th>
<th>SYSTEM</th>
<th>CONTROL</th>
<th>SERVICE</th>
</tr>
</thead>
<tbody>
<tr>
<td>V Position</td>
<td>100</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>H Position</td>
<td>100</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Phase</td>
<td>100</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Tracking</td>
<td>100</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Sync Level</td>
<td>100</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

- Use the ▲ and ▼ keys to select from:
  - **V Position** fine tunes the vertical position of the image
  - **H Position** fine tunes the horizontal position of the image
  - **Tracking** adjusts the frequency of the pixel sampling clock, so that all pixels generated by the video source are sampled. Steady flickering or several soft vertical stripes or bands across the entire image indicate poor pixel tracking.
  - **Phase** adjusts the phase of the pixel sampling clock relative to the incoming signal. Adjust the phase when an RGB or Component image still shows shimmer or noise after the tracking has been optimized.
  - **Sync Level** adjusts the voltage level of the projector’s sync signal detection circuitry. Sync Level adjustment is occasionally necessary when a signal source signal drops “below black” (for example, during scenes with explosions or when subtitles are present) and causes the projector to temporarily lose sync.

- Use the ◀ and ▶ keys to adjust the setting from 0 to 200.

- To return to the **Advanced menu**, press MENU once.
Advanced menu continued

HSG

- Press ENTER or SELECT.

The HSG submenu will appear:

<table>
<thead>
<tr>
<th>MAIN</th>
<th>ADVANCED</th>
<th>SYSTEM</th>
<th>CONTROL</th>
<th>SERVICE</th>
</tr>
</thead>
<tbody>
<tr>
<td>HSG Select</td>
<td>Hue</td>
<td></td>

</tbody>
</table>

- Use the and keys to select from:
  - HDMI 1
  - HDMI 2
  - RGB
  - Component 1
  - Component 2
  - Video
  - S-Video

- For each source, use the and keys to select from:
  - On the selected source will be included in an automatic input source search
  - Off the selected source will not be included in an automatic input source search

- To return to the System menu, press MENU once.
4. Controlling the projector

System menu continued

Menu Position
- Use the ▲ and ▼ keys to select from:
  - Top left
  - Top right
  - Bottom left
  - Bottom right
  - Centre

Blank Screen
This option determines what appears on screen when the projector is searching for a valid input source.
- Use the ▲ and ▼ keys to select from:
  - Digital Projection logo
  - Black screen
  - Blue screen
  - White screen

Auto Power On
- Use the ▲ and ▼ keys to select from:
  - On: When power is connected, the projector starts up immediately.
  - Off: When power is connected, the projector goes into Standby mode, and does not start until POWER ON ▲ on the remote control or POWER on the projector control panel is pressed.

Auto Power Off
When the projector is searching for a valid input source, this option determines what appears on screen.
- Use the ▲ and ▼ keys to select from:
  - On: The projector automatically goes into Standby mode if no input source is detected for 20 minutes.
  - Off: The projector stays on until POWER OFF ▲ on the remote control or POWER on the projector control panel is pressed.

Notes
- To exit from the menus completely, you may need to press ▼ up to three times.
- Image changes made using the menus will take effect immediately.
System menu continued

Rear Projection
- Use the ◄ and ► keys to select from:
  - On: Projected image is reversed, left to right
  - Off

Ceiling Mode
- Use the ◄ and ► keys to select from:
  - On: Projected image is reversed, top to bottom
  - Off

Logo Display
- Use the ◄ and ► keys to select from:
  - On: The Digital Projection logo is displayed during power up
  - Off

Notes

To exit from the menus completely, you may need to press the MENU key up to three times.

Image changes made using the menus will take effect immediately.
4. Controlling the projector

Control menu

- To display the menus, press MENU on the remote control or the projector control panel.

- Use the < and > keys to select the Control menu page,

<table>
<thead>
<tr>
<th>MAIN</th>
<th>ADVANCED</th>

</tbody>
</table>

Menu = Exit  Menu Select < >  Scroll ▲▼

- To select a menu item, use the ▲ and ▼ keys until the item is highlighted.

Trigger 1 & 2

The Trigger 1 and Trigger 2 outputs are interchangeable:

Screen trigger: can be connected to an electrically operated screen, automatically deploying the screen when the projector starts up, and retracting the screen when the projector shuts down.

Aspect Ratio trigger: can be used to control screen shuttering for different aspect ratios

- For each Trigger setting, use the ▲ and ▼ keys to select from:

  Screen  trigger occurs when the projector is in RUNNING mode
  16:9  trigger occurs when 16:9 aspect ratio is selected
  Theaterscope  trigger occurs when Theaterscope aspect ratio is selected
  4:3  trigger occurs when 4:3 aspect ratio is selected
  4:3 Narrow  trigger occurs when 4:3 Narrow aspect ratio is selected
  RS232  trigger output follows the On or Off setting specified in a trig.1 or trig.2 command received from a PC via the RS232 serial input.

Notes

To select a different menu, press MENU once or twice, so that no items are highlighted, then use the the < and > keys to select a different page.

To exit from the menus completely, you may need to press up to three times.

For more information about the trigger output, see Control connections in section 6. Appendix.

For more information about RS232 commands, see Remote communications protocol in section 6. Appendix.

Control menu continued

Auto Source

- Use the [<] and [>] keys to select from:

  On          projector searches for an alternative input source when the current input source is disconnected
  Off         projector shows a ‘blank’ screen when the current input source is disconnected

Keys 1 to 5

The [1] to [5] keys on the remote control can each be programmed to switch to one of the seven input sources.

- Use the [▲] and [▼] keys to select a Key, then press ENTER or SELECT.

  The Key submenu will appear:

<table>
<thead>

</tbody>
</table>

Menu = Exit  Scroll  

The first eight items are for information only, and cannot be changed.

- To select a menu item, use the and keys until the item is highlighted.

Factory Reset

- Press ENTER or SELECT to request a Factory Reset.

  The following message will be displayed.

  ![Reset Everything](image)

- Use the and keys to select from:
  - Yes  all settings will be restored to factory defaults
  - No

  Press ENTER or SELECT to confirm your choice.

Notes

To select a different menu, press MENU once or twice, so that no items are highlighted, then use the the and keys to select a different page.

To exit from the menus completely, you may need to press up to three times.

Restore Defaults will restore all settings to factory defaults.

If you are not sure this is what you want to do, then either:
- make a record of all settings first
- or select No, then press ENTER or SELECT
4. Controlling the projector

Service menu continued

Blue Only
This is useful for color-calibrating the projector or other video components.

- Use the ◀ and ▶ keys to select from:
  - On: only the blue signal is displayed - green and red are turned off
  - Off: all three signals - red, green and blue - are displayed

Test Patterns
- Use the ◀ and ▶ keys to select from:
  - Test Pattern Off
  - White
  - Black
  - Red
  - Green
  - Blue
  - Cyan
  - Magenta
  - Yellow
  - Chequerboard
  - Greyscale
  - Alignment grid
- To turn the test pattern Off, press any other key.

Altitude
For use at high altitudes where the air is thinner, the fan speed can be increased.

- Use the ◀ and ▶ keys to select from:
  - Low: normal speed fan
  - High: high speed fan

Notes

To exit from the menus completely, you may need to press ▼ up to three times.

Image changes made using the menus will take effect immediately.

Some menu items may be greyed out - unavailable due to the effect of settings made in other menus, or due to the type of input signal.

If the projector frequently overheats when used in a high altitude environment, then it may help to use the High Altitude setting.

In most cases, the Low Altitude setting should be satisfactory.
5. Maintenance

Contents

Changing the LED module ........................................................................................................... 5.2
Cleaning the fans .......................................................................................................................... 5.2
5. Maintenance

Changing the LED module

- The LED module should be changed only by qualified and authorised service personnel.
- Contact your Digital Projection Dealer.

Cleaning the fans

- Turn the power OFF and wait until the fans stop.
- Use a vacuum cleaner to clean the inlet and outlet fans, as shown below.

Notes

The LED module in this projector should be changed ONLY by authorised and qualified service personnel.

Always switch the projector OFF before cleaning the fans.

The fans should be cleaned regularly:
- In a clean environment such as an office, after 500 hours.
- In a dusty or smoky environment such as a theatre or public area, more frequent cleaning may be necessary.

</tr>
<tr>
<td>The projector will not power up.</td>
<td>Note that the blue POWER indicator light will be OFF when the projector is in normal RUNNING MODE. Check that the mains plug is plugged in and that the mains supply is switched on. Check any external fuses or breakers.</td>
</tr>
<tr>
<td>The projector will not power up shortly after being switched off.</td>
<td>To protect the LED module, the projector cannot be switched on when in it is in cool-down mode. Wait until the power indicator shows steady blue. showing that it is in standby mode.</td>
</tr>
</tbody>
</table>
| The projector shuts down after it has been in use for some time.       | The projector may be overheating. Check that the air inlets and outlets are clear of any obstruction. | See section 5. Maintenance, Cleaning the fans  
It is possible to increase the speed of the fans for use in a high altitude environment:  
See section 4. Controlling the projector, System menu  
The projector may be overheating. Check that the air inlets and outlets are clear of any obstruction. |
| No image is displayed.                                                  | Check that the input source is switched on and connected to the projector correctly. Check that the correct image source is selected. Check that the brightness and contrast settings are set correctly. See section 4. Controlling the projector, Using the control keys and Main menu  
The projector may be overheating. Check that the air inlets and outlets are clear of any obstruction. |
| The image does not fit the screen correctly.                           | Check that the projector and screen size are positioned correctly, and that the zoom is adjusted correctly. See section 2. Installation, Screen size vs throw distance  
Check the aspect ratio setting. See section 4. Controlling the projector, Main menus |
<p>| Uneven image quality.                                                  | Check that the projector is parallel to the screen. Check that the screen is flat, and securely mounted. |</p>

In the event that this troubleshooting guide has not solved the problem, then contact your Digital Projection dealer or service centre.
6. Appendix

Error codes

If the projector detects an error, the red Issue indicator will flash, as shown in the chart below.

For example, if the fan fails, the red indicator will flash twice followed by a pause, then the sequence will repeat until the error condition is corrected.

Specifications

Part numbers
Projector
0.73:1 fixed lens 110-001
1.56–1.86:1 zoom lens 110-002
1.85–2.40:1 zoom lens 110-003
Power cable 10A, Europe 102-163
Power cable 13A, North America 102-165
Power cable 10A, United Kingdom 102-180
Remote control 109-685
User manual on CD 110-288
Important Information 110-287
Getting Started Guide 111-185

Replacement parts
LED module 109-683
0.8x converter lens 109-727
1.25x converter lens 109-735

Optical
Digital Light Processor 1 x 0.95" Texas Instruments DMD™, resolution 1920 x 1080 pixels
Colour system 3-cycle (normal running mode): Red/Green/Blue
5-cycle (Brilliant Color on): Red/Green/Blue/Yellow/Cyan
Contrast Ratio 10000:1 (±10%)
Colour temperature adjustable: 5500K - 9300K
Pixel fill factor 87%
Lamp life (typical) 60000 hours
Brightness 1000 ANSI lumens (±10%)
Uniformity 85%

Focus range
0.73:1 Fixed lens to be confirmed
1.56–1.86:1 zoom lens 2–7m (6.6 - 23ft)
1.85–2.40:1 zoom lens 2.5–10m (8.2 - 32.8ft)

Image width
0.73:1 fixed lens to be confirmed
1.56–1.86:1 zoom lens 0.86 to 5.6m (2.8 - 18.4ft) depending on lens converter
1.85–2.40:1 zoom lens 0.81 to 6.86m (2.7 - 22.2ft) depending on lens converter
6. Appendix

Lens aperture
- 0.73:1 fixed lens F/2.5
- 1.56–1.86:1 zoom lens F/2.5–2.76
- 1.85–2.40:1 zoom lens F/2.17–2.46

Lens shift (zoom lenses only)
- Vertical ± 0.6 H (120%)
- Horizontal ± 0.15 W (30%)

Electrical

Inputs
- HDMI x 2, RGB, Component x 2, Video, S-Video

Pixel clock (digital)
- up to 165MHz

Bandwidth (analog)
- 200MHz

Control inputs
- 1 x RS232 serial: 38400 baud, 8 bits, 1 stop bit, no parity
- 1 x remote control

Mains voltage
- 100-240 VAC ±10%, 47-63Hz (single phase)

Power consumption

International Regulations
- Meets FCC Class B requirements
- Meets EMC Directives (EN 55022, EN 55024)
- Meets Low Voltage Directive (EN60950)

Indicators
- Power, Issue (Fault)

Physical

Temperature
- Operating 10 to 35°C
- Storage -20 to 60°C

Thermal Dissipation
- 478 BTU/hr

Humidity
- Operating 20% to 90% non condensing
- Storage 10% to 90%

Altitude
- Operating up to 10,000 feet
- Storage up to 40,000 feet

Weight
- 15 kg (33 lbs)

Noise level
- < 30 dB

Control connections

Wired Remote control connection
3.5mm mini jack
Tip Signal
Ring Not connected
Sleeve Ground

Trigger 1 & 2 output
3.5mm mini jack
Tip Signal
Sleeve Ground

Serial control input
1 unused
2 Received Data (RX)
3 Transmitted Data (TX)
4 unused
5 Signal Ground
6 unused
7 unused
8 unused
9 unused

Null-modem cable
(used to connect the projector to a modem)
RX 2 --- 3 TX
TX 3 --- 2 RX
GND 5 --- 5 GND

Serial port settings
- Baud rate 38400 bps
- Data length 8 bits
- Stop bits one
- Parity none
- Flow control none

Notes
- Trigger outputs are normally at 0V, and rise to +12V when triggered.
- The projector is a DCE, so use:
  - a straight cable to connect to a computer, or
  - a null-modem cable as shown here to connect to another DCE such as a modem.
Remote communications protocol

Introduction
The projector can be controlled by using an external control system or a PC via an RS232 serial interface, using a terminal-emulation program, such as HyperTerminal.

There are 2 types of commands:
- Key commands
- Operation commands

All commands consist of ascii text strings starting with 2 letters:
- ky for key commands.
- op for operations commands.

All commands end with an ascii Carriage Return character.

Key Commands
Key commands are used to simulate remote control key presses, and use the following format:

ky <keyname> [CR]

Example
ky pow.on [CR] simulates the POWER ON key being pressed.

The commands

<table>
<thead>
<tr>
<th>Code transmitted</th>
<th>&lt;keyname&gt;</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0x01</td>
<td>pow.on</td>
<td>Turn power on.</td>
</tr>
<tr>
<td>0x09</td>
<td>pow.off</td>
<td>Turn power off.</td>
</tr>
<tr>
<td>0x15</td>
<td>menu</td>
<td>Bring up or cancel menu display.</td>
</tr>
<tr>
<td>0x17</td>
<td>enter</td>
<td>Keypad enter.</td>
</tr>
<tr>
<td>0x18</td>
<td>cur.down</td>
<td>Keypad down arrow.</td>
</tr>
<tr>
<td>0x1A</td>
<td>cur.up</td>
<td>Keypad up arrow.</td>
</tr>
<tr>
<td>0x1D</td>
<td>cur.left</td>
<td>Keypad left arrow.</td>
</tr>
<tr>
<td>0x1F</td>
<td>cur.righ</td>
<td>Keypad right arrow.</td>
</tr>
<tr>
<td>0x80</td>
<td>bright</td>
<td>Bring up or cancel brightness slide bar.</td>
</tr>
<tr>
<td>0x81</td>
<td>contrast</td>
<td>Bring up or cancel contrast slide bar.</td>
</tr>
</tbody>
</table>
### Code transmitted | <keyname> | Description
--- | --- | ---
0x82 | sharp | Bring up or cancel sharpness slide bar.
0x83 | nr | Bring up or cancel noise reduction slide bar.
0x85 | gam.sw | Switch to the next gamma value.
0x8B | src.1 | Switch the active source to source 1.
0x8C | src.2 | Switch the active source to source 2.
0x8D | src.3 | Switch the active source to source 3.
0x8E | src.4 | Switch the active source to source 4.
0x8F | src.5 | Switch the active source to source 5.
0x93 | osc.sw | Switch to the next Overscan mode.
0x98 | mem.1 | Recall user memory associated with the User Memory A key.
0x99 | mem.2 | Recall user memory associated with the User Memory B key.
0x9A | mem.3 | Recall user memory associated with the User Memory C key.
0x9D | asp.sw | Switch to the next aspect ratio setting.
0xA3 | bcolor.sw | Switch Brilliant Color on or off.
0xAA | ctemp.sw | Switch to the next colour temperature value.
0xAD | pattern.sw | Switch to the next test pattern.
Operation Commands

Operation commands are used to simulate menu operations and determine the settings of the projector, and use the following format:

op <operation> <command> [CR]

The <command> string can take one of the following formats:

<table>
<thead>
<tr>
<th>&lt;command&gt;</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Set = &lt;value&gt;</td>
<td>Makes the setting take that value.</td>
</tr>
<tr>
<td>Get ?</td>
<td>Asks what the current value is. The value is returned as an ascii text string.</td>
</tr>
<tr>
<td>Increment +</td>
<td>Adds 1 to the current value.</td>
</tr>
<tr>
<td>Decrement -</td>
<td>Subtracts 1 from the current value.</td>
</tr>
<tr>
<td>Execute (none)</td>
<td>Performs an action.</td>
</tr>
</tbody>
</table>

Example

- op aspect = 1 [CR] sets the aspect ratio to Theaterscope.
- op aspect ? [CR] asks what is the current aspect ratio.
- op bright + [CR] increments the brightness setting.
- op resync [CR] commands the projector to attempt to re-synchronise to the current input source.

Notes

Note: in the examples, spaces are included for clarity, but are not necessary in the actual command.
